The present invention describes isolated polynucleotides and protein encoding and representing the enzymes cinnamate 4-hydroxylase (C4H), commarate 3-hydroxylase (C3H), phenolase (PNL), C-methyl transferse (OMT), cinnamyl alcohol dehydrogenase (CAD), cinnamoyl-CoA reductase

s and proteins (ylase (C4H), transferase

Claim 1; Page 187-188;

Novel polynucleotide encoding enzymes involved in lignin-biosynthetic pathway useful for producing transgenic plants especially eucalyptus and pine species having altered lignin content, composition and

```
laccase, peroxidase, ferulate-5-hydroxylase (FH), alpha-amylase, caffelc acid methyl transferase, caffeoly coa methyl transferase, counterate COA ligase, cytochrome P450 LXXIA, diphenol oxidase, flavanol glucosyl transferase, flavanoid hydroxylase, and isoflavone reductase, which are involved in the lighth biosynthetic pathway. The polynucleotides can be used for modulating lighth content, lighth composition and the structure of a plant, especially eucalyptus and pine species, and for modifying the activity of an enzyme involved in lighth biosynthetic pathway, and for producing a plant having altered lighth content, composition and structure. They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any crganism and for PCR amplification. The lighth content can be efficiently modified using the polynucleotides. AAA67908 to AAA68201 and AAB.6341 to AAB16449 represent polynucleotides. AAA67908 to AAA68201 and AAB.6341 to Cambification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 β
                                                 The present invention describes a set of peroxidase genes found in CC plants, especially rice, and their homologues, modified forms and CC fragments, where the sequences of the peroxidase genes in the set are CC given in AAH44071 to AAH44091. Also described are: (1) promoters for the CC control of the gene set; (2) the preparation of cassette vectors using CC the genes and promoters; (3) analysis of plant characteristics using the CC peroxidase set by isolating RNA from the plant, binding the RNA to a CC membrane, mixing with a labelled peroxidase gene set, incubating, and CC detecting the label signal to show which genes in the set are expressed CC expression analysis. The set of genes are used for the analysis of the CC expression analysis. The set of genes are used for the analysis of the pattern of peroxidase gene expression in particular rice plants and CC their component tissues and under different environmental conditions, CC and modification of rice plants to provide desired specificities of CC plants such as response to bacterial infection by Magnaporthe grisea.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ohashi Y,

Novel polynucleotide encoding enzymes involved in lighth-biosynthetic pathway useful for producing transgenic plants especially encalyptus and pine species having altered lighin content, composition and structure

Claim 1; Page 184; 213pp; English.

CC encoding and representing the enzymes cinnamate 4-hydroxylase (C4H), CC coumarate 3-hydroxylase (C3H), phenolase (PNL), O-methyl transferase CC (CMT), cinnamyl alcohol dehydrogenase (CAD), cinnamyl-coA reductase CC (CCR), phenylalanine ammonia-lyase (PAL), 4-coumarate:COA ligase (4CL), CC coniferol glucosyl transferase (CAD), coniferin beta-glucosidase (C8G), CC caffeic acid methyl transferase, caffeoyl cOA methyl transferase, CC coumerate COA ligase, cytochrome p450 LXXIA, diphenol oxidase, flavanol qlucosyl transferase, flavanol hydroxylase, and isoflavone reductase, CC which are involved in the lighin biosynthetic pathway. The CC composition and the structure of a plant, especially eucalyptus and pine CC polynucleotides can be used for modulating lighin content, lighin CC composition and the structure of a plant, especially eucalyptus and pine CC polynucleotides, and for modifying the activity of an enzyme involved in lighin CC content, composition and structure of a plant, especially eucalyptus and pine CC polynucleotides, and for producting a plant having altered lighin CC content, composition and structure. They can be used for designing probes CC and primers useful for detecting similar DNA and RNA sequences in any cc modified using the polynucleotides. AhA67908 to AhA68201 and AhAB16341 to AhAB16445 represent polynucleotides and protein sequences used in the cCC exemplification of the present invention.

The present sequence is a synthetic Nicotlana sylvestris peroxidase gene which is optimised for expression in plants. The sequence may be introduced into plants to produce insect-resistant plants, preferably maize. It is useful for controlling insects such as ostrinia nubilalis, Heliothis zea and Spodoptera frugiperda. The transgenic seeds and plants can be used for the breeding of improved plant lines which, for example, increase the effectiveness of conventional methods such as harbicide or pesticide treatment or allow the conventional methods to be dispensed with. The peroxidase enzymes can be used in multiple insect control strategies, resulting in maximal efficiency with minimal impact on the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      transgenic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a synthetic Micotiana tomentisiformis peroxidase gene which is optimised for expression in plants. The sequence may be introduced into plants to produce insect-resistant plants, preferably maize. It is useful for controlling insects such as Ostrinia nubilalis. Heliothis zea and Spodoptera frugiperda. The transgenic seeds and plants can be used for the breeding of improved plant lines which, for example, increase the effectiveness of conventional methods such as herbicide or pesticide treatment or allow the conventional methods to be dispensed with. The peroxidase enzymes can be used in multiple insect control strategles, resulting in maximal efficiency with minimal impact on the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tobacco; Nicotiana tomentisiformis; peroxidase; insecticide;

First-strand cDNA was prepared from oligo-dT selected mRNA by priming with an xhoI oligo-dT primer. The resulting DNA:RNA hybrid was treated with RNase H and used as a template for DNA PolI-catalyzed second strand synthesis. After the addition of EcoRI adaptors, the ds-cDNAs were digested with XhoI and size-selected. The resulting molecules were directionally cloned into the EcoRI and XhoI sites of the HybriZAp lambda vector (Stratagene) and excised as pAD-GAL4 phagemids."

SalI adaptors were added to the ends, the ds-cDNAs were then digested with NotI and size-selected. These were directionally-cloned intothe zipLox phage vector, exised as plasmids, and then individually analyzed. "

First-strand cDNA was prepared from oligo-dT selected mRNA by priming with an Xhol oligo-dT primer. The selected pNA:RNA hybrid was treated with RNASE H and us as a template for DNA POLI-catalyzed second strand synthesis. After the addition of Econd adaptors, the ds-cDNAs were disested with Xhol and size-selected. The resulting molecules were directionally cloned into the EcoRI and Xhol sites of the HybrizAP lambda vector (Stratagene) and excised as PAD-GAL4 phagemids." a 226 c 210 g 194 t 52 others

/clone_lib="Pathogen induced 1 (PII)"
/clone_lib="Pathogen induced 1 (PII)"
/note="Organ: Anthracnose-infected leaves from
two-week-old sorghum plants 48 hr after inculation:
vector: pBluescript II from Lambda Zap II; Site_1: XhoI;
Site_2: EcoRI; Two-week-old sorghum plants (BTX 623
cultivar) were infected with pathogen (isolate FRM42I of
Collectorichum graminicola, which is a sorghum isolate).
RNA was prepared from infected leaves harvested from 45
seedlings 48 hours after inoculation. Note: young
seedlings (2 weeks old) exhibit juvenile resistant
reaction, which is an incompatible interaction. As they
grow older (4 weeks or older), plants resume susceptiblity
to anthracnose disease. The library was made from poly-A
RNA in the cloning vector lambda ZAP II. Clones to be
sequenced were prepared by mass excision. WARNING: While
most or all ESTs are expected to derive from the host
plant, no effort was made to eliminate ESTs deriving from
the pathogen."

two-week-old sorghum plants 48 hr after inoculation;
Vector: pBluescript II from Lambda Zap II; Site_1: XhoI;
Site_2: EcoRI; Two-week-old sorghum plants (BTX 623
cultivar) were infected with pathogen (isolate FRM42 of
Colletotrichum graminicola, which is a sorghum isolate).
RNA was prepared from infected leaves hirvested from 45
seedlings (2 weeks old) exhibit juvenile resistant
reaction, which is an incompatible interaction. As they
grow older (4 weeks or older), plants resume susceptiblity
to anthracnose disease. The library was made from poly-A
RNA in the cloning vector lambda ZAP II. Clones to be
sequenced were prepared by mass excision. WARNING: While
most or all ESTs are expected to derive from the host
the nathogen "The plant of the plant of the
/organism="Sorghum bicolor"
/db_xref="taxon:4558"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      two-week-old sorghum plants 48 hr after inoculation; Vector: pBluescript II from Lambda Zap II; Site_1: XhoI; Site_2: EcoRI; Two-week-old sorghum plants (BTX 623 cultivar) were infected with pathogen (isolate FRM421 of Colletotrichum graminicola, which is a sorghum isolate). RNA was prepared from infected leaves harvested from 45 seedlings 48 hours after inoculation. Note: young seedlings (2 weeks old) exhibit juvenile resistant reaction, which is an incompatible interaction. As they grow older (4 weeks or older), plants resume susceptiblity to anthracnose disease. The library was made from poly-A RNA in the cloning vector lambda ZAP II. Clones to be sequenced were prepared by mass excision. WARNING: While most or all ESTs are expected to derive from the host plant, no effort was made to eliminate ESTs deriving from the pathogen."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ρ

//note="Organ: Anthracnose-infected leaves from
two-week-old sorghum plants 48 hr after inoculation:
vector: pBluescript II from Lambda Zap II; Site_1: XhoI;
Site_2: EcoRI; Two-week-old sorghum plants (BTX 623)
cultivar) were infected with pathogen (isolate FRM42I of
Colletotrichum graminicola, which is a sorghum isolate).
RNA was prepared from infected leaves harvested from 45
seedlings (2 weeks old) exhibit juvenile resistant
reaction, which is an incompatible interaction. As they
grow older (4 weeks or older), plants resume susceptiblity
to anthracnose disease. The library was made from poly-A
RNA in the cloning vector lambda Zap II. Clones to be
sequenced were prepared by mass excision. WARNING: While
most or all ESTs are expected to derive from the host
plant, no effort was made to eliminate ESTs deriving from
the pathogen."
